MFA360™

Multi-Factor Authentication by SecureGovernComply®

Passwords alone are no longer enough. In today's world of phishing, credential theft, and brute-force attacks, **identity is the new security perimeter**. Businesses that rely solely on passwords leave themselves exposed to costly breaches, ransomware, and compliance failures.

SecureGovernComply's **MFA360™ Multi-Factor Authentication**—powered by Microsoft 365—adds a powerful layer of protection to every login. By requiring employees to verify their identity through multiple factors (something they know, something they have, something they are), we dramatically reduce the risk of unauthorized access while keeping security seamless and user-friendly.

Strengthen Identity Security

Verifies users with more than just a password.

Supports biometrics, SMS, phone call, email, and Microsoft Authenticator app.

Protects against phishing, credential stuffing, and brute-force attacks.

Seamless Microsoft 365 Integration

Native to Microsoft 365 and Azure Active Directory.

Works across Outlook, Teams, OneDrive, SharePoint, and all Microsoft cloud apps.

Extendable to third-party apps for complete coverage.

Flexible Authentication Options

Push notifications and biometric approvals.

One-time passcodes (OTP) via email or SMS.

Adaptive MFA that adjusts based on risk (e.g., location, device, time of day).

Compliance-Ready Security

Meets regulatory requirements for HIPAA, PCI-DSS, GDPR, CMMC, and more.

Provides audit-ready authentication logs.

Strengthens cyber insurance eligibility and lowers premiums.

User-Friendly Experience

Simple setup and fast deployment.

Reduces password reset requests and IT support tickets.

Empowers employees with secure, frictionless login experiences.

Centralized Visibility & Reporting

Monitor login attempts and authentication challenges.

Detect suspicious behavior in real-time.

Generate reports for executives and compliance officers.

The SecureGovernComply Difference

Built on Microsoft 365 – Industry-standard identity protection with enterprise-grade reliability.

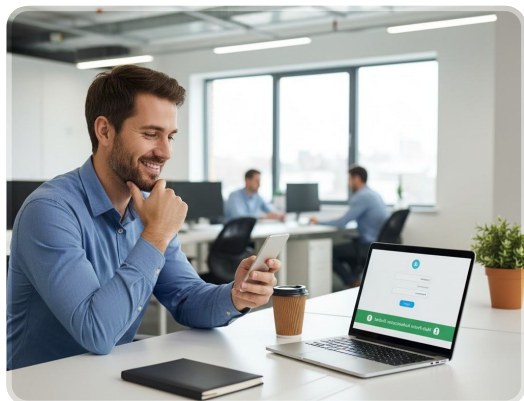

Security + Simplicity – Protects your business without slowing down productivity.

Designed for SMBs – Scalable, cost-effective, and easy to manage.

End-to-End Coverage – Works across cloud, hybrid, and remote environments.

At SecureGovernComply, we know that securing access is the foundation of modern cybersecurity. With **MFA360™**, your business gains powerful identity protection that's simple, scalable, and proven.

MFA360™: Because your business deserves more than just a password.
