ManagedEndpoint360™

Endpoint Patching & Management by SecureGovernComply®

Unpatched endpoints are one of the biggest vulnerabilities for small and mid-sized businesses. Malware, ransomware, and other cyberattacks often exploit outdated software and unpatched systems, creating preventable breaches.

SecureGovernComply's **ManagedEndpoint360™** ensures that all devices—laptops, desktops, and servers—are **always updated, secured, and compliant**. By automating patch deployment, managing configurations, and monitoring endpoint health, we help your business reduce risk, improve productivity, and maintain compliance—all without overburdening your IT staff.

Automated Patch Management

Automatically deploy security updates for operating systems and applications.

Schedule patching to minimize downtime and disruption.

Ensure consistent patching across all endpoints, remote or on-site.

Endpoint Configuration Management

Standardize device settings for security and compliance.

Remotely manage endpoints with minimal user disruption.

Enforce policies to prevent configuration drift and vulnerabilities.

Real-Time Monitoring & Reporting

Continuous monitoring of endpoint health and patch status.

Alerts for failed updates, unpatched systems, and unauthorized changes.

Centralized dashboards with actionable insights and audit-ready reports.

Integration with IT & Security Workflows

Works seamlessly with IT ticketing and management platforms.

Aligns patching and endpoint management with overall security strategy.

Supports IT teams in prioritizing remediation based on risk and business impact.

Compliance-Driven Management

Helps meet requirements for PCI DSS, HIPAA, NIST, and other regulatory frameworks.

Provides reports for auditors and executive leadership.

Strengthens cyber insurance posture through documented controls.

Scalable & Affordable

Designed for SMBs with limited resources.

Cloud-based deployment minimizes infrastructure costs.

Flexible plans to scale as your business grows.

The SecureGovernComply Difference

Peace of Mind – Ensure your workforce operates on secure, reliable systems.

Security + Compliance – Protect endpoints and satisfy regulatory obligations.

Proactive Protection – Reduce vulnerabilities before they are exploited.

Automation + Expertise – Automates patching while providing expert oversight.

With **ManagedEndpoint360™**, SecureGovernComply keeps your devices secure, updated, and compliant—so you can focus on running your business, not chasing patches.

ManagedEndpoint360™: Protect, patch, and manage every endpoint—completely.
